* Yield is based on Net Yield to Maturity (computed as YTM – expense ratio). Yield to Maturity is the rate of return anticipated on a bond if held till maturity. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity

**Fixed Maturity Plans are close-ended debt mutual fund schemes, investing in securities maturing on or before the date of the maturity of the scheme.

***Short Duration Funds are schemes with investments in debt & money market instruments such that the Macaulay duration of portfolio is between 1-3years.

****MTM refers to mark to market gains from bonds

INVESTMENT IDEA

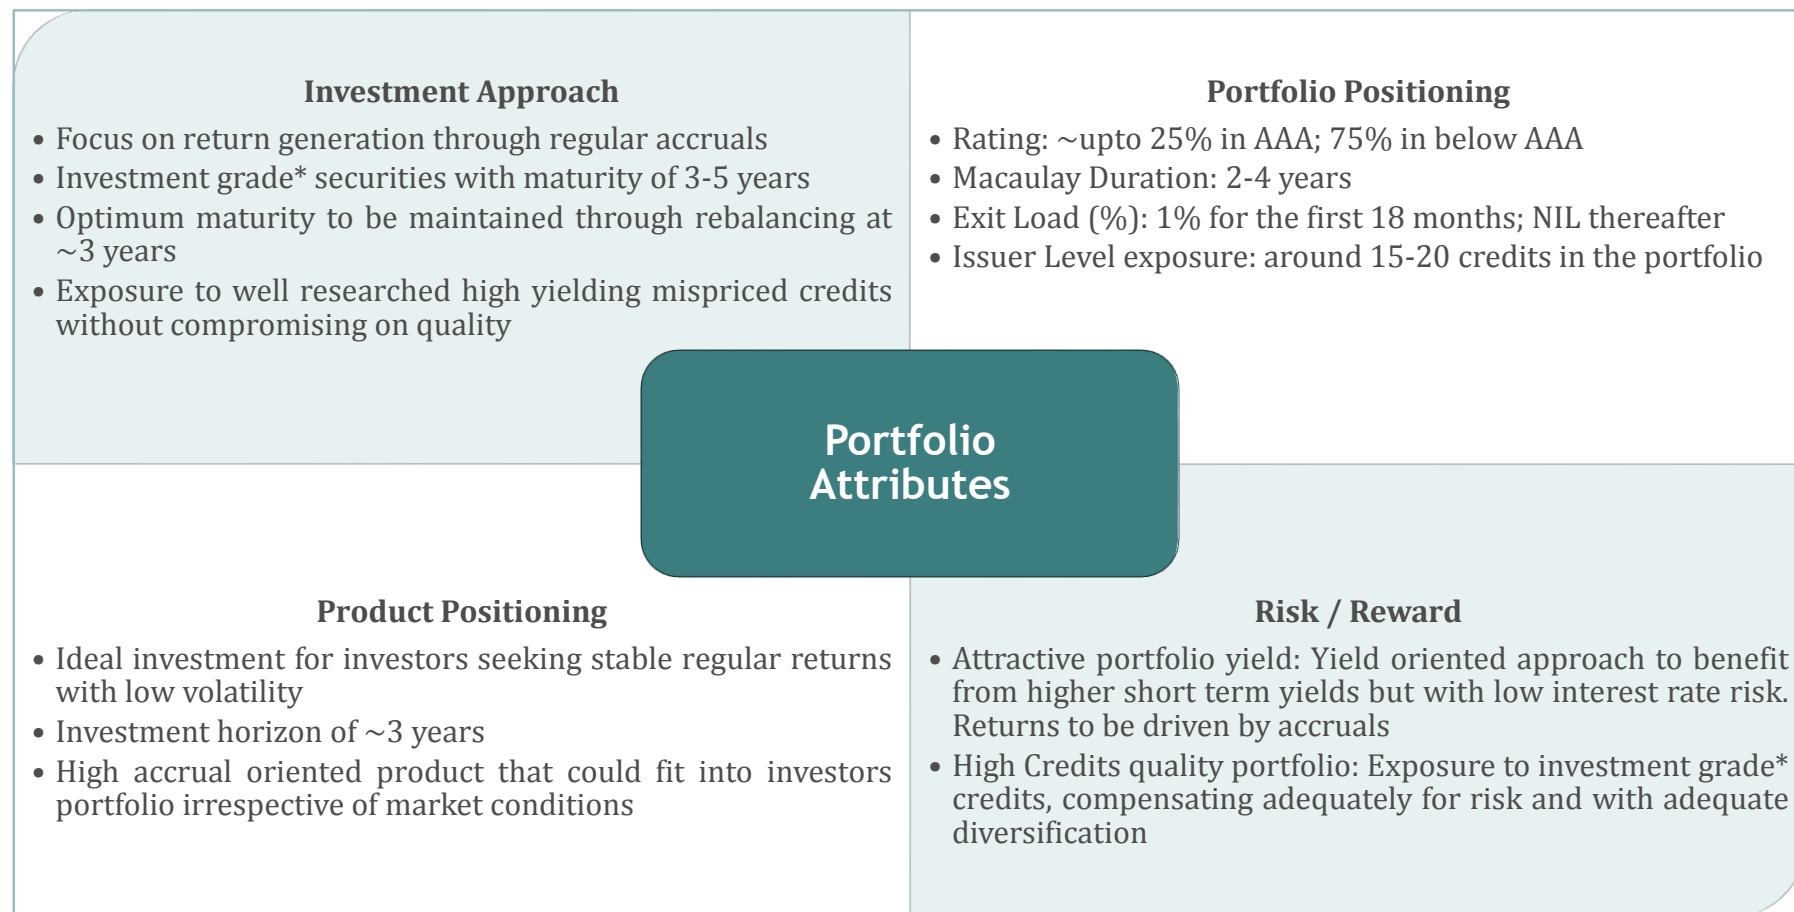

Accumulating the yields in the portfolio as in a buy and hold approach

In current scenario investment in debt & money market instruments with average Macaulay Duration of 2 – 4 years at the current yield levels to accumulate the yields in the portfolio

Portfolio would have potential to benefit from capital gains if interest rates ease in future and higher accruals due to optimized credit spreads

High Accrual oriented approach from well calibrated mispriced credit opportunities with potential for MTM (marked to market) gain from run down effect of portfolio over 3 years
